? OpenMAIC — Simple Summary

OpenMAIC is an AI-powered learning/classroom platform.

Its main purpose is:

Give a topic or document → AI creates a complete interactive learning experience.

Simple example

Suppose you enter:

"Teach me Angular Authentication"

OpenMAIC roughly works like this:

```
You give a topic
      ↓
OpenMAIC
      ↓
AI creates a learning plan
      ↓
AI generates the lesson
      ↓
```

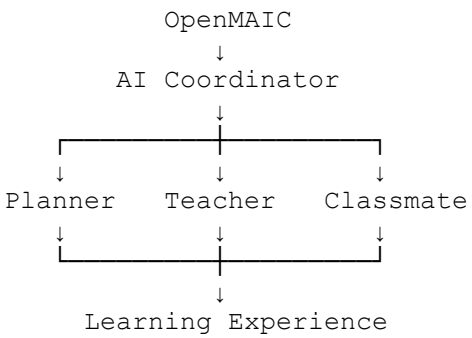

Slides	Quiz	Explanation

```
      ↓
Interactive classroom
      ↓
You learn + interact with AI
```

□ Why "Multi-Agent"?

OpenMAIC doesn't depend on only one AI role.

Think of it like a **virtual classroom with several AI workers**:

For example:

- **Planner** → decides what should be taught.
- **Teacher** → explains the topic.
- **Classmate/other agents** → participate in interaction/discussion.
- **Other specialized agents** → help generate or modify content.

🎯 What can OpenMAIC create?

It can create things such as:

- 🧑‍🏫 **Slides**
- ❓ **Quizzes**
- 🎮 **Interactive simulations**
- 🧑‍🏫 **AI teaching**
- 💬 **AI discussions**
- 📝 **Whiteboard explanations**
- 🔊 **Voice**
- 📚 **Document-based lessons**
- 🧑‍💻 **Project-based learning**
- 📤 **PPTX / HTML / video outputs** in supported workflows

🔑 The most important concept

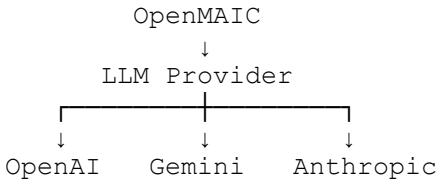

Remember this one flow:

```
       USER
        ↓
Topic / Document
        ↓
     AI PLAN
        ↓
   AI AGENTS
        ↓
 CONTENT GENERATION
        ↓
Slides / Quiz / Simulation
        ↓
   PLAYBACK
        ↓
Interactive Classroom
```

And where does the AI come from?

OpenMAIC itself is **not ChatGPT or an AI model**.

It connects to AI/LLM providers:

The LLM provides the intelligence; **OpenMAIC organizes that intelligence into a classroom experience**.

One sentence to remember

OpenMAIC is an open-source AI classroom platform that uses multiple AI agents and AI models to automatically create and run interactive learning experiences from topics, documents, or projects.
